

## Dynamsoft Enhances its Version Control Solution

Posted for [Dynamsoft](#) by [Catherine Sea](#) on July 29th 2010 and filled under [Technology](#)

Dynamsoft Corporation, a leading developer of version control and bug tracking software, today announced an update for its version control solution - SourceAnywhere, which comes with both Hosted and Standalone editions.

SourceAnywhere is SQL-based source code control software designed to be a replacement of Microsoft Visual SourceSafe. The solution provides integration with Visual Studio, Eclipse and Macromedia Studio as well as other MSSCCI compatible IDEs.

"We have some developers using it with Visual Studio 2010 and some other developers using it for source control on a website. It works great for both purposes and even better they have THE BEST customer support I have ever had the pleasure to work with", said Troy Miller, IT/Project Manager, Technology Solutions, Inc. MSSCCI Plug-in further boosts its performance by up to 30%~50% in the new release.

New features are also introduced, including optimized integration with SQL Server Management Studio and uniPaaS, better support for web projects and moving files/folders in IDEs.

Designed to be a VSS replacement, SourceAnywhere comes with similar UI and an import tool from SourceSafe. "I found the learning curve to be almost nonexistent", commented Jordan Light, ameritech.net.

The new version of VSS Import Tool benefits users by reduced time, improved stability as well as stronger fault tolerance. The whole process is now divided into four stages. This enables developers to perform [source control](#) operations even during the import process. "I'm very pleased by great acceleration of importing (from 10 days to 8 hours)", commented from a customer who tested the beta version.

Dynamsoft is committed to deliver strong, fast and stable source control tools. Attesting to its commitment, a major release, SourceAnywhere 3.0, is coming this year.

About Dynamsoft:

Every year, thousands of customers turn to [Dynamsoft Corporation](#) for world leading version control and issue tracking technologies. At the core of these technologies are well thought-out and properly executed products that align to today's development needs while offering dramatic improvements in development flexibility, speed, reliability and security. This, in turn, helps development teams build better quality products on time. Dynamsoft Corporation version control tools are used globally by thousands of developers including Apple, EMC, Fujitsu, GE, HP, 3M, HR Block, IBM, InfoSys, Intel, Olympus, PricewaterhouseCoopers, Samsung, Siemens, Symantec, Philips, Verizon, Unisys and others.
